

Canadian preferred shares

What are preferred shares?

Preferred shares are hybrid instruments that combine features of both equity and debt. They allow a company to raise capital without diluting voting rights while providing investors with stable income through fixed or floating, typically cumulative, dividend payments.

Key benefits

Benefit	Description
Attractive yields	Preferred shares generally offer higher yields than traditional corporate bonds.
High-quality issuers	They are mostly issued by major investment-grade institutions.
Regular income	Dividends are typically paid quarterly and can be either fixed or floating.
Portfolio diversification	They offer low correlation to bonds and distinct features from common equities.
Capital gains potential	Capital gains are possible through price appreciation, depending on market conditions.
Stock market liquidity	Traded on stock exchanges, they offer pricing transparency and secondary market liquidity.
Potential tax efficiency	Dividends generally benefit from more favorable tax treatment than interest income.

Example of a Canadian preferred share¹

	Canada 30yr bond	BCE Inc. 30yr bond	Canada high yield	BCE Inc. preferred share	With tax adv.
Yield	3.44%	5.66%	6.12%	8.47%	11.45%

A compelling investment for insurers

Insurer portfolio

- ✓ **Optimization of regulatory capital:** Preferred shares require less capital than their common counterparts.

	Capital risk factor
Common share	35%
Preferred share	5-10%

- ✓ **Portfolio diversification:** Preferred shares span various types, issuers, and sectors, providing diversification across interest rate sensitivities and credit exposures.

Immunizing portfolio

- ✓ **Immunization of interest rate and credit risk:** Fixed-rate preferred shares have long duration and therefore can contribute to matching the interest rate and credit risk profile of insurance liabilities.

Surplus portfolio

- ✓ **Improved risk/return profile:** With regular income, capital gains potential and low correlation with other assets, preferred shares are a strong complement to surplus portfolios.
